

Cleaning Evaluation

DHP is a primarily an advanced water treatment training and multimedia production company. DHP has no affiliation with any chemical vendor or membrane manufacturer. DHP does not sell chemicals. DHP will provide unbiased results.

A DHP cleaning evaluation starts out with a standard DHP element autopsy to identify the nature of the scalant and/or foulant. Click on the following links to obtain detailed information on DHP autopsy services:

- [Autopsy Report](#)

In addition to a standard DHP autopsy, a DHP cleaning evaluation consists of the following:

- Testing up to a dozen or more proprietary and generic cleaners on the foulant/scalant to see which one(s) work the best.
- Testing the best cleaner(s) using different cleaning procedures to determine which cleaning procedure works best
- Providing a final report that documents every step of the cleaning evaluation.
