

# Autopsy Report

---

A standard DHP Autopsy report is typically 40-60 pages long. It includes all of the information needed to understand the problem(s) identified and the recommendations provided. The report contains the following:

1. An **Autopsy Introduction** that provides the necessary information to understand the terminology and results of the autopsy
2. The information from the **Autopsy Questionnaire** that the client filled out.
3. 20-40 pages of text and pictures detailing every step of the autopsy. You can click on the following links to see sample pages:

[External Construction](#)

[Internal Construction](#)

[Membrane Testing](#)

4. Typically a 2-3 page **Statement of Results** that summarizes and discusses all of the findings and provides recommendations.
